

Carex 'Rekohu Sunrise'

GENERAL DESCRIPTION

From New Zealand, this tender *Carex* is the first variegated form of this species. Wide green leaves have a striking, creamy gold, banded variegation. The arching leaves give it a weeping look that is unsurpassed trailing over rocks, walls or the edge of a container.

USES

Evergreen, it is great for beds and borders in milder winter areas and very showy in massed plantings. Easy to grow, it makes an excellent mixed container or specimen plant for year-round appeal.

GARDENER TIPS

- Plant in well-drained soil in full sun or partial shade.
- Keep soil moist to prevent possible leaf-tip scorch.
- If it becomes large and untidy, rather than cutting it back, just remove the large, strappy, outer leaves and preserve the central new shoots, which will quickly fill out the plant.

PLANT DATA

- Height: 24–30"/—
- Spread: 24"
- Bloom time: insignificant
- USDA Zone: 7(0°)

PATENT INFORMATION

Asexual propagation prohibited
C. trifida 'REKOHU SUNRISE': COPF,
