|-----------------|------------------------|
| Genus | Salix |
| Variety | 'Hakuro-nishiki' |
| Exposure | Full Sun to Part Shade |
| Height | 4-6' |
| Spread | 5-8' |

Description Spectacular pink, white, and green variegation substitutes for flowering on a vigorous deciduous shrub with red stems in winter. Excellent waterside or in shrub borders.

Care Prefers moist to wet soil, but will tolerate drier ones. Fertilize in spring. Prune during the season for colorful new growth.

Perennial

USDA Hardiness Zone: 4(-30°)
